

## Educational Session

***Odom BH***

***“Managing Pediatric Cases Complicated by Open Wounds”***

***America Physical Therapy Association Combined Sections Meeting. Denver, CO.  
February 15, 2020.***

This session will focus on the overall management of pediatric patients, ranging from neonates to teenagers, whose clinical cases are complicated by the presence of open wounds. Speakers will discuss anatomy and physiology of pediatric skin, pediatric wound assessment, and clinical decision making for incorporating wound care interventions into the overall plans of care. Patient scenarios with open wounds as both a primary and secondary diagnosis will be presented. This session will help to positively impact PTs and PTAs who treat pediatric patients—even those who don't specialize in wound management.
